CAREER OBJECTIVE

Backend developer with hands-on experience in Core java, Java EE & Spring Boot, Node.js, NestJS/ExpressJS, and PostgreSQL, supported by five AWS certifications and practical internship work. Currently focused on mastering system design and reliability while building scalable applications. Aspiring to contribute to enterprise-level infrastructure where correctness, reliability, and scale are critical.

EDUCATION

BSc (Hons) Computing

2024 – Present

Islington College · London Metropolitan University, Kathmandu

WORK EXPERIENCE

Developer Intern

August 2026 – Present

Karmachari Sanchaya Kosh (EPF Nepal), Lalitpur Pulchowk

- Collaborating with development teams and stakeholders on requirements gathering, SRS documentation, system design, and UML/ERD diagrams.
- Building software features and REST APIs on .NET against an Oracle database within an existing enterprise system.

Full-Stack Developer Intern

March 2026 – June 2026

Leaflet Digital Solutions, Kathmandu

- Building data-intensive systems with Node.js, Express, Next.js and PostgreSQL responsible for both architecture decisions and implementation.
- Designing and securing API pipelines with JWT authentication and role-based access control across multitenant applications.
- Producing API documentation with Swagger, enabling clean handoffs and reducing integration time for frontend teams.

TECHNICAL SKILLS

Backend: Java (Java EE/Spring Boot), .NET, Node.js (NestJS/Express.JS), TypeScript, Python

Frontend: React, Next.js, Tailwind CSS, HTML5, CSS3

Databases: PostgreSQL, MySQL, MongoDB, Redis, Oracle

Architecture: MVC, REST API design, JWT/session auth, role-based access control

Cloud & infra: AWS, Docker, Vercel, Render, Git Action (CI/CD)

Tools: Git, Postman, Power BI, Microsoft Office

PROJECTS

Nebula — Virtual Stock Trading & Learning Platform

NestJS · TypeScript · React · PostgreSQL · Redis · Prisma · Socket.IO · Docker

- Built a full-stack stock trading simulation across three independently deployable services: a React client, a NestJS API server, and a standalone market simulation engine.
- Designed a real-time market engine using Geometric Brownian Motion with a Box-Muller transform, circuit breakers, and a Redis-backed order book with price-time priority.
- Enforced strict layered architecture (Controller → Service → Repository → DTO) with dual authentication (JWT + Google OAuth), Redis-locked wallet transactions, and integer-paise money handling.

MediLife — Hospital Management System

Java 21 · Jakarta EE · Apache Tomcat 10 · MySQL · Maven · JSP/JSTL · Gson

- Developed a hospital management platform under MVC architecture with patient registration, doctor approval, appointment scheduling, billing, and medical records.
- Built dual booking flows (Quick Consult vs. Admin-assigned) with rejection/reassignment logic.
- Implemented secure authentication (BCrypt, sessions), doctor licence approval, account lock/unlock, and event-driven notifications with reporting/export features.

CERTIFICATIONS

- **AWS Academy Graduate** – Cloud Foundations, Data Engineering, Machine Learning Foundations, Machine Learning for NLP, Generative AI Foundations
- **UI/UX with Figma, Java Object-Oriented Programming**
